

## Residential Water Meter

Vallecitos Water District provides water to properties through water mains. A water main connection is established at the frontage of the property and is brought to the property line. Then a meter box and a water meter are installed. The size of the meter is determined by water usage/water demand and fire flow determined by the local Fire Agency.

The diagram below shows the location of where the customer's responsibility begins at the meter and Vallecitos Water District's responsibility.
